# My Project.

**Bank Statement Converter**

Bank Statement Converter is a web application for accountants, bookkeepers, and finance teams who work with bank statement PDFs. It solves a simple but common problem: PDF statements are difficult to use in accounting workflows, while manual transfer into spreadsheets is slow and error-prone.

The product converts PDF bank statements into structured transaction data that can be reviewed, edited, and exported as CSV or JSON. This makes the workflow faster, cleaner, and easier to integrate into real bookkeeping and finance operations.

Made with Chronicle

# From idea to deployed product

Stage 1

## Core conversion flow

- Google sign-in
- PDF upload
- Bank statement conversion
- CSV and JSON export

Stage 2

## Review and usability

- Automatic processing after upload
- Editable preview table
- Conversion history
- Search and status tracking

Stage 3

## Deployment and developer access

- Production deployment on VM
- Public API docs with Scalar
- Personal API key in profile
- Polished UI and stable infrastructure

Made with Chronicle

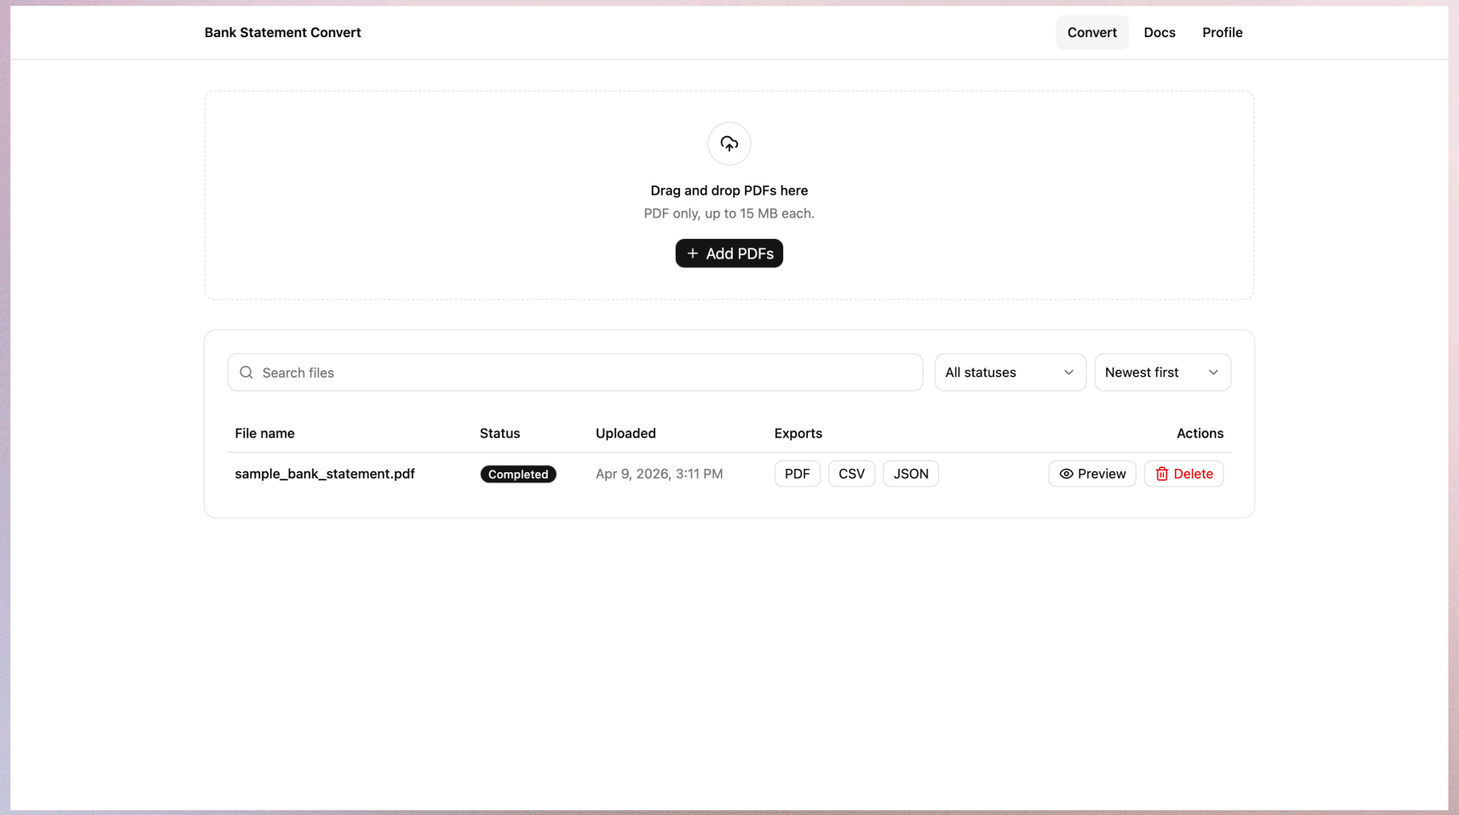
Tech Stack

1. SvelteKit, TypeScript
2. Ruby on Rails
3. PostgreSQL
4. Google OAuth
5. OpenAPI, Scalar
6. Ubuntu VM
7. Nginx, Cloudflare

Made with Chronicle

# Demo

A full workflow from PDF upload to structured export.



## Conversion workflow

1. Sign in with Google and upload a bank statement PDF
2. The backend processes the file and generates structured transaction data

## Review and export

1. Open the parsed result, review the extracted rows, and edit them if needed
2. Export the final data as CSV or JSON, or use the API for automation
